**12:00 - 13:30 Industry Panel 1 - Infrastructure and Resources
 Diversification of Sources and Supply Routes
 Interconnectors**
DESCRIPTION

Energy is indispensable to progress, as we know it.

Energy is the backbone of the economy with a salient contribution to the growth of GDP and a welfare generator for the society. However, energy is a political commodity, its sources (especially the fossil resources) and supply routes being increasingly dependent on politics, becoming tools of supremacy. At over 50% dependency on foreign energy sources and with a bill of 1 bn. EURO per day, European Union needs to decide the faith of its energy mix and relations on the international arena, today!

This panel attempts to address the impact of the Energy Union project upon the member states and highlights the main lessons learned with a clear focus on the way forward.

Moreover, the speakers are invited to address the topic of security of supply with focus on developing local resources and alternative routes of supply. Electricity interconnectors are also part of the discussion.

15:00 - 17:00 Industry Panel 2 - Securing the Smart Grid through Innovation and Digitalization
DESCRIPTION

Discussions will focus this 7th year edition of the Romanian Energy Day on the next decade's challenges for the power grids and provide insights and solutions through innovative projects, demonstrators and pilots. Special attention will be devoted to sectorial integration, as well as integrated energy market in the Central and South-Eastern region.

Participants will be faced with industry representatives in a dialogue on how to maximize renewable energy sources integration through innovation and by putting the right infrastructure in place.

The interconnection of Smart Grids operating in different MS is already happening at TSO level but there is a need of more coordination between the TSOs and DSOs and also amongst DSOs.

There is a need for more integration of the distribution grid and the transmission systems to enable digital and physical interconnections at the distribution level and cross-borders in the future. There are synergies to be exploited amongst the Telecoms, Energy and Transport sectors in terms of digitization and infrastructures. Close collaboration amongst these sectors is needed in order to use resources efficiently and effectively.

6TH of June, 2018

10:00 – 11:00 Register and Welcome Coffee

11:00 – 13:00 Policy Panel 1 - Financing the Transition Costs to a Low-Carbon Economy
 Legislative & Regulatory Implications

DESCRIPTION

The European Union, followed by its member states, is drawing a pathway towards low-carbon economy and environmentally benign electricity generation. As a whole, the action plan is excellent, yet it must facilitate and coordinate 27 heterogeneous energy markets, with various "energy realities".

Decreasing the environmental impact and the energy intensity is a must, increasing the share of renewable energy sources has clear benefits, yet their implementation cannot be uniform across Europe. Moreover, the issue of financing this transition is constantly put into debate and often a justification for preserving the status quo.

This panel will draw on the policy framework designed by the "Clean Energy package" and will debate the regulatory implications and the financial burden it potentially creates – national perspectives apply.
